

BELL JAR LIGHT - INSTALLATION INSTRUCTIONS

GLOVES (NITRILE) ARE PROVIDED AND MUST BE WORN DURING INSTALLATION TO AVOID FINGERPRINTS ON THE FINISH OF THE EXPOSED METAL PARTS.

Congratulations on your purchase of a SkLO Bell Jar light.

- 1 Carefully unpack all the individual parts and lay them out on a protective surface that will not mar the finishes or scratch the glass. Gloves (nitrile) are provided and must be worn during installation to avoid fingerprints on the finish of the exposed metal parts.
- 2 Place glass “bell jar” in position desired for light fixture.
- 3 Install the provided light bulb into the socket on the metal lighting element.
- 4 Carefully insert the bulb and socket of the lighting element into the open top of the glass bell jar until the top of the lighting element sits atop and around the top neck of the glass. Note: If a different light bulb is used which does not fit through the opening in the glass neck, then care must be taken not to pull the lighting element upwards when bulb is installed, and light bulb would have to be changed by lifting the glass element and reaching inside (not recommended).
- 5 Plug in, turn on switch.
