

STEM 1X TABLE LIGHT

Installation Instructions

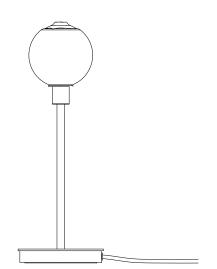

STEM 1X TABLE LIGHT

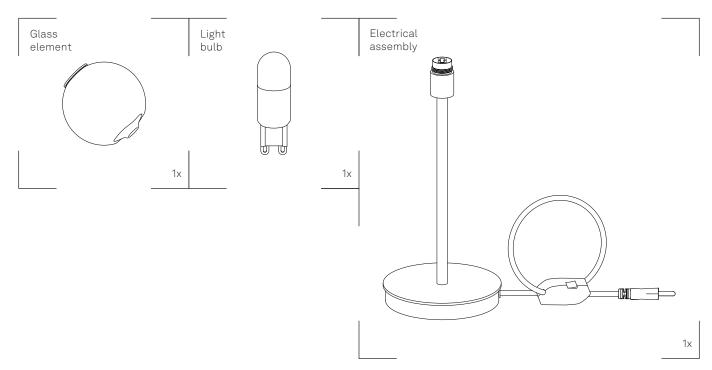

Congratulations on your purchase of a SkLO Stem 1X Table Light. Use a maximum 7W bulb.

When unpacking individual items and parts of the light fixture, make sure to lay them out on a protective surface that will neither mar the delicate metal finishes nor scratch the glass. Gloves (nitrile) are provided and must be worn during installation to avoid fingerprints on the finish of the exposed metal parts.

Your SkLO fixture will arrive with the hand-blown glass elements packed separately from the light fixture itself.

CONTENTS:

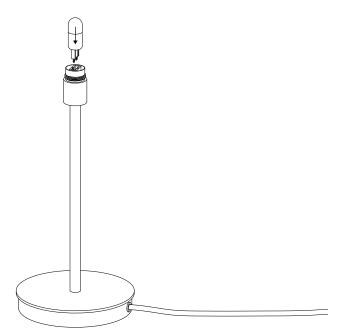

- Carefully unwrap the brass electrical assembly.
 The base of the brass electrical assembly has a fabric-wrapped electrical cord with in-line on/off switch and plug.
- 2. Install the supplied LED light bulb (7W Max) into the socket (Figure 1). This fixture uses G9 socket and light bulb. The G9 is a bi-pin socket. Light bulb is to be inserted and removed by pushing the bulb straight into the socket, and by pulling it straight out. The bulb, when inserted, should have a tight fit. Do not force the bulb. If there is resistance, check to make sure nothing inside the socket is bent or obstructing the bulb. Always turn off the power to the fixture when changing the bulb.
- 3. Install the hand-blown glass element on the top of the light. The glass element has a threaded brass insert on the bottom. Slip the threaded brass insert of the glass sphere over the light bulb and onto the threaded socket. Thread glass sphere onto socket. Do not overtighten. To change light bulb, simply unthread the glass spheres when necessary (Figure 2).

4. Plug in.

PLEASE NOTE: If the electrical cord of this luminaire is damaged, it must be replaced exclusively by the manufacturer, its service technician, or a person with the same qualifications to prevent the danger of electric shock and/or injury.

2.
