

SkLO Stem Options Ordering Guide

SkLO offers multiple options for the stem-suspended pendant and chandelier designs of our Light Collection.

Our Modular Stem Kits are sets of field-adjustable pre-cut stem lengths that can be combined in different ways to achieve multiple possible lengths. The individual lengths are combined by threading them together with internally threaded nipples. Customers can also order multiple quantities of either kit, or different combinations of both, which allows for infinite field-adjustability. Our Cut-to-Order Stem option allows customers to specify their desired fixture length – SkLO then provides non-field-adjustable stems to meet those specifications. The hardware finish and price of all stem options will automatically match the hardware finish specified for the light fixture ordered.

STANDARD STEM KIT

All Light Collection stem-suspended pendant and chandelier fixtures automatically include a Standard Stem Kit as part of the price of the fixture. The Standard Stem Kit includes:

- (1) 6"/152mm stem
- (2) 12"/305mm stems
- (1) 18"/458mm stem

The Standard Stem Kit can be assembled in 8 different lengths in 6"/152mm increments ranging from 6"/152mm to 48"/1220mm (see Page 2). It is ideal for use with light fixtures used over kitchen islands, in hallways and in other spaces with standard residential ceiling heights.

EXTENDED STEM KIT

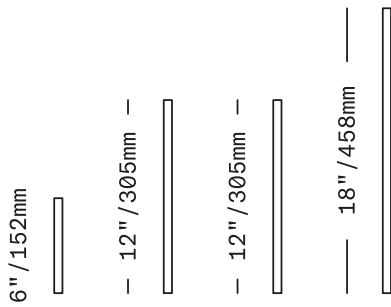

All Light Collection stem-suspended pendant and chandelier fixtures offer the option to choose the Extended Stem Kit instead of the Standard Stem Kit. An additional charge applies, based on the difference between the Standard Stem Kit and the Extended Stem Kit. The Extended Stem Kit includes:

- (1) 6"/152mm stem
- (1) 12"/305mm stem
- (1) 18"/458mm stem
- (1) 24"/610mm stem
- (1) 36"/915mm stem

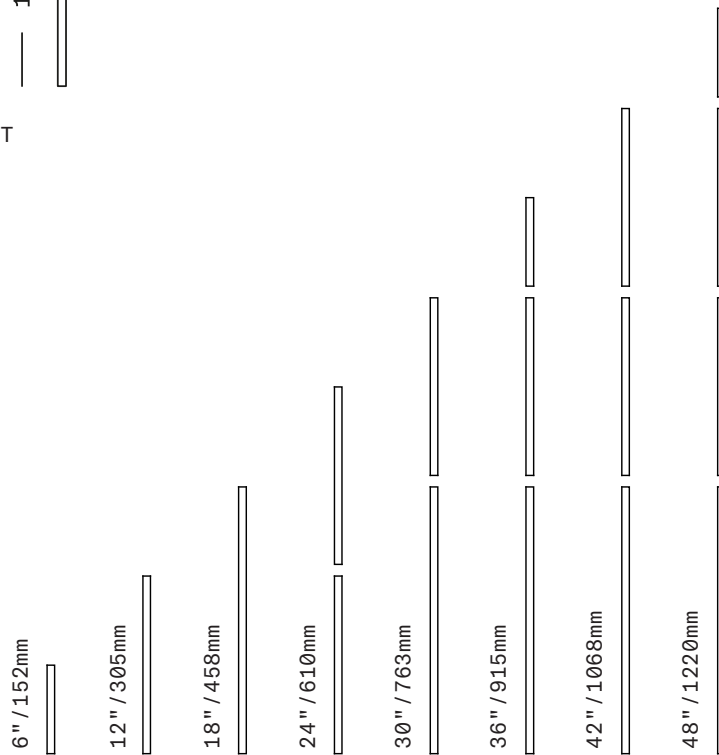

The Extended Stem Kit can be assembled in 16 different lengths in 6"/152mm increments ranging from 6"/152mm to 96"/2440mm (see Page 3). The Extended Stem Kit can accommodate higher ceilings, stairwells and hospitality spaces.

CUT-TO-ORDER STEMS

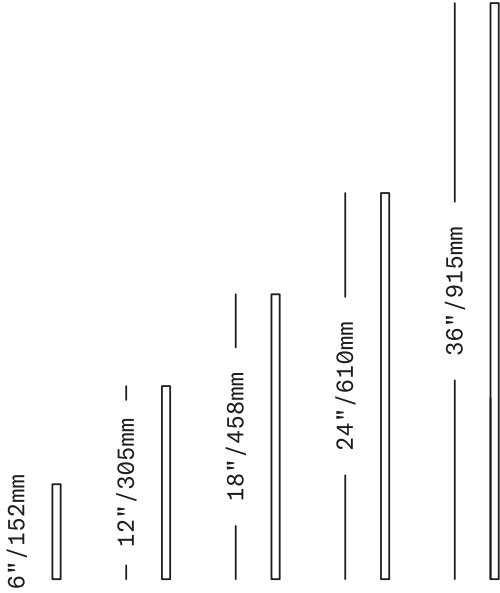

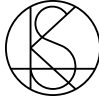

Customers provide an overall fixture length (OAL) specification with their order, and SkLO provides custom stem(s) to meet their specification. Note that customers do not specify stem length, but rather the OAL, which is the distance from the ceiling mounting surface to the lowest part of the fixture. SkLO calculates the length of the stem(s) based on the specified OAL. OAL must be specified at the time of the order. Each fixture has a specified OAL length within which no additional fee is charged for Cut-to-Order stems, and an upcharge per each additional 12"/300mm or fraction thereof for longer OALs.

DETAILS AND TERMS

Internal wiring and/or any associated exposed fabric-wrapped electrical cord(s) are automatically sized to length based on the Stem Kit(s) ordered or the Cut-to-Order stem length specification.

SkLO does not accept returns of unused stem sections from Stem Kits, nor does it refund the cost of unused stem sections from any Stem Kit(s).

SkLO does not credit the cost of unused Stem Kits or individual stem sections purchased with separately or previously ordered SkLO fixtures toward new or future SkLO fixture orders.

SkLO does not warrant the use of stem sections from Stem Kits for any purpose other than the SkLO fixtures for which the given kit(s) were ordered.
